

PROBLEM

Concrete floats at a local marina were manufactured such that gaps and height variations between floats caused slip and trip concerns.

SOLUTION

Transitional areas were covered with Braxx permanent anti-slip sheet. To match the concrete at the marina, a custom blend of grey UHMW with UV stabilizers was used as the base material.

UHMW has outstanding physical properties. It will not rot, split crack or peel even in abusive marine environments. It is impervious to fresh and salt water, extreme outdoor temperatures and is resistant to oil, gasoline and many solvents.

Because UHMW is soft, it conforms well to uneven surfaces making it an ideal solution for this application. UHMW exhibits no notch sensitivity and acts as a living hinge due to its elongation properties.
