

Flexifend® - Flexible fender system

Engineered for maximal performance in conjunction with the US Navy, Flexifend® is the ultimate dock and boat fender technology. The unique leaf spring shape allows the material to absorb energy and return to its original shape with no permanent deformation. Fenders fully recover from repeated collisions *and* heavy loads. Made from lightweight UHMW, Flexifend® installs easily and is virtually maintenance free.

Flexifend® highlights

- Ideal for docking or close contact
- Non-abrasive and non-marking
- Impervious to salt water, oil, chemicals and marine borders
- Low coefficient of friction
- Six times more abrasion resistant than steel
- Available in UV stabilized colors to meet your specification

Flexifend® in action

Flexifend® protects the hulls of landing crafts (LCU) used by amphibious forces. LCUs are critical for transporting tracked and wheeled vehicles, troops and other military assets ashore. LCUs are typically carried aboard amphibious assault ships to objective areas around the world.
